Excerpt: . . . and some of them are such as might give very incorrect results at very low temperature ranges for which they are not intended; this is due to the fact that for such extreme values a relatively small incorrectness in the constants may give rise to relatively large errors in the results. The equations are really correct only over the measured ranges and then only as far as they agree with these; beyond this in either direction they are only probably so. The sensitiveness of the constants of some of these equations at the low temperatures suggests that perhaps for this reason it might be better to determine them at these low temperatures at which the tests involve less difficulties, and permit of greater accuracy. Attention is here again called to the fact that thruout this paper T represents the drop of temperature in the...
