Reviews

An exceptional ebook along with the typeface employed was intriguing to see. It really is simplistic but surprises within the fifty percent of the ebook. It is extremely difficult to leave it before concluding, once you begin to read the book.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 234 pages. Dimensions: 9.7in. x 7.4in. x 0.5in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1888 edition. Excerpt: . . . The Jura, arresting the passage of the winds which bear the vapour drawn from the ocean, forces them also to let fall their burden of moisture. By tracing a transverse line to the valley of the Saone from the heights of s Charolais to the mountains of Jura, M. Fournet has ascertained that the annual precipitation increases tolerably regularly with the altitude; from 27-4 inches on the right bank of the Saone it increases gradually to the parallel wall of the Jura; on the western side it becomes greater with the altitude, and thus from the height of the ground we could estimate the mean quantity of rain. On the southern slope of the Cevennes, where the winds blow with such violence because of the rapid variations of temperature produced by insolation and radiation, the difference which is observed between the annual falls of rain is still more considerable than at the foot of the other mountains of France. Over the town of Arles the total precipitation is 17-7 inches; but at some 60 miles to the north the town of Joyeuse, situated in the valley of Ardeche, which overlooks the mountain rampart of Tanargue, received in 1811 as much as 67-6 inches, and the annual mean is about 51 inches. On the 9th of October, 1827, enormous quantities (287 inches) of water fell there in the space of 21 hours; more than falls on an average on the soil of France during a...
